# Enhance Company Image & make You and your Clients more relax while presenting Business Presentation in your conference room

**Many companies already doing it, why let your clients feel that the company is lagging behind !**

During presentation, the presenter do not have direct control of Lighting, Projector Screen etc. and always need someone to on/off Lighting and bring up and down the Projector Screen when he/she need to use the white board and projector screen interchangeably.

He may very often has to fumble around a few remote control to control the right AV system (TV, VCR, Video Projector etc.) after realizing that he/she has picked the wrong remote to control the AV equipment. It may be embarrassing when such suddenly interruption happen during presentation especially before the customers or audience.

All these cause unnecessary interruption during the presentation while the company always want to look good or keep up-to-date before important customers.

When things may go wrong, it will ! Why allow Murphy Law at work when such awkward situation can be avoided during important presentation.

This is all that you need, a Credit Card Size Programmable LCD Remote Control and a few Intelligent Modular IR Receivers

to control all Lighting, Projector Screen, Video or Overhead Projector, Curtain, TV, VCR and some air-conditioner too etc.

**You and your company will surely look good, at least for the FIRST impression you projected as they see the way you control all those equipment at your finger tips.**

No complicated equipment to install or thousands of dollars to spend but just a simple low cost All-in-one Remote Control & Automation Module to control Lighting, Overhead Projector, Projector Screen, Curtain, TV and VCR with Only One Credit Card Size Programmable LCD Remote Controller and with only one button to activate all the above as an option.
